Inspection Systems, Inc. to Show Simplified *Compliance-Pro™*  
*Data Match System* at Labelexpo Americas 2010

Minneapolis, August 23, 2010. For Immediate Release. Inspection Systems, Inc. (I.S.I.) will introduce a new, simple single-head version of their popular Compliance Pro™ Data Match barcode matching system. The lower priced single head system will be available in addition to the previously released multi-head system.

The Compliance Pro™ Data Match ensures that all barcodes can be scanned, and that the encoded data matches a designated encodation. Both multi and single head systems are easy to use with two-button operation. Scanned barcodes will trigger a reaction/output if they either do not scan properly, or do not match the designated standard barcode.

Available outputs include sounding an alarm, stopping the equipment, applying a cover-up label, or rejection of product.

Frequently used by printing companies on rewinder equipment, unique benefits include:

- Simple operation / set up
- Multiple outputs available
- 2000 scan per second scan head
- Accepts all standard symbology

“We are pleased to offer both versions of this fast, accurate barcode matching system.” says John Gorowsky, V.P. Sales & Marketing. “Some of our clients expressed a wish for a simpler single head option, and we feel it’s a win-win situation to be able to offer it.”

Inspection Systems, Inc. along with their partner, Axicon Auto-ID, will be in Hall F - Booth # 6308.
